

CALMMOON Noise Protection Sheeting

CALMMOON is a laminated damping sheet developed by Sekisui Chemical pioneering in the development of cutting-edge materials.

- Consists of a metal and a vibration-damping resin layer.
- The resin layer converts vibration energy into thermal energy, which is absorbed.

Applications

Railroad

Automotive

Shipbuilding

Construction

CALMMOON Sheeting Features

Highly Vibration-Absorbing

The unique molecular structure and adaptability of the resin guarantees an outstanding vibration-absorbing performance.

Highly Fire-Retardant

Due to its metal-reinforced structure and the fire-retardant resin layer, CALMMOON sheeting meets very high incombustibility standards.

Extremely Durable

Due to the metal reinforcement, the resin is only minimally affected by ultraviolet light or other factors, providing long-term performance of 15 years or longer.

Light and Thin

Only 1.3 mm thick and lightweight at approx. 4 kg/m², CALMMOON sheeting is extremely vibration-absorbing. Also suitable for later reconditioning.

Easy Installation

CALMMOON sheeting is easily installed. Simply peel off the protective film and affix. No special tools or skills are required.
